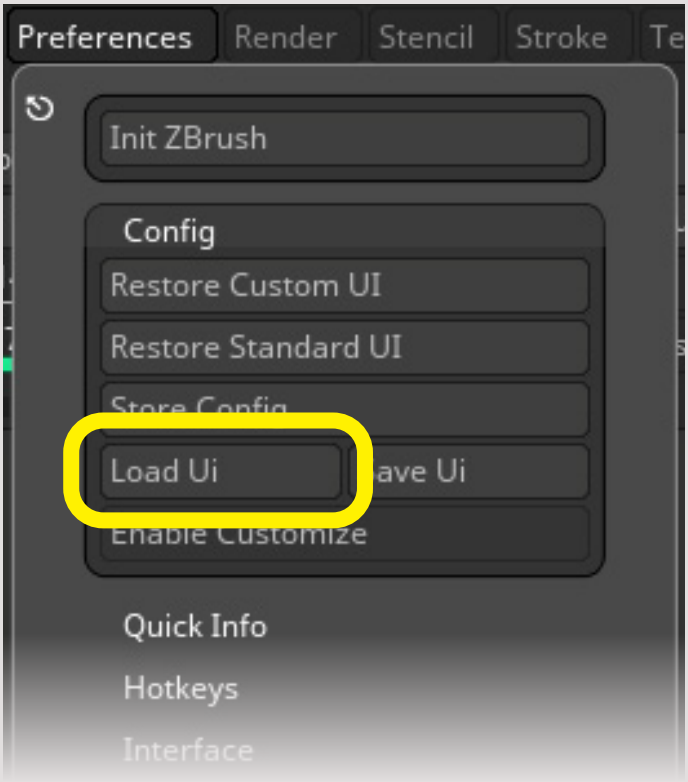
ULTIMATE ZBRUSH GUIDE COURSE

STARTER KIT

Important: Extract all the files from the starter kit '.zip' file before trying to load them.

Loading Custom UI

From the main menu (called 'palettes'), go to **Preferences** and click the **Config sub-palette** to open it. From this subpalette, click on the **Load UI** button and choose the **UZG_CUSTOM_UI.cfg** file from the starter kit.

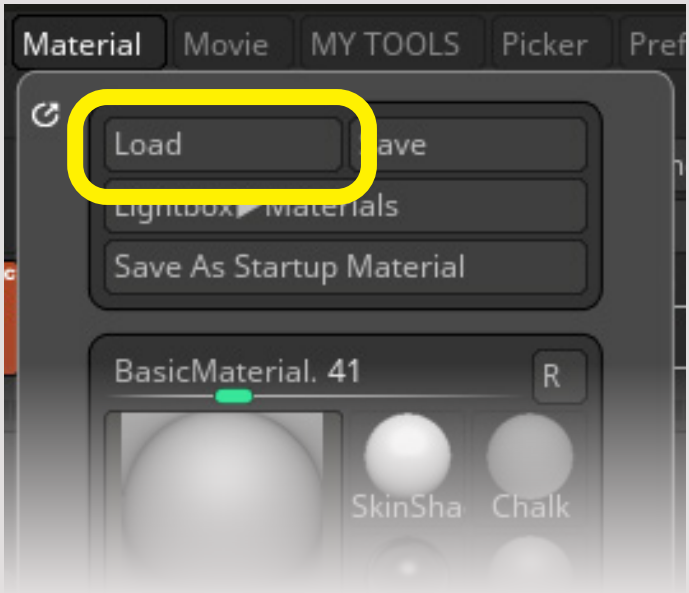


Loading Custom Brushes

From the **Brush Palette**, click on the **Load Brush** button and choose a brush file (.ZBP) from the starter kit.

Loading Custom Materials

From the **Materials Palette**, click on the **Load** button and choose a brush file (.ZMT) from the starter kit.



Note: *If you really like a particular material, whether is material from this starter kit or not, you can save it as the start-up material so every time you launch ZBrush, your favorite material will be selected automatically. To do that, select the material you want, and from the Material palette, click on the '**Save as startup material**' button.*
